

B2 + B3 + DIGITAL

B2

Heidelberg 74V - affectionately known as Winston

Our big press which prints a sheet size up to 720 x 520mm. It can print 5 colours in one pass, which copes with most jobs and produces a first class result on a range of materials from 80gsm offset up to 450gsm board. Heidelberg is the recognised name in printing for a very good reason, tried and tested over many years and the benchmark for quality and consistency in our industry.

B3

Heidelberg Anicolor - nicknamed Bertie

Our new baby. The Heidelberg Anicolor, pitched at the fast turnaround jobs, but offering a litho solution to what is generally considered a digital market. We can "make ready" a job in under 8 minutes and achieve running speeds in excess of 10K per hour, but with no compromise on quality. With a sheet size of 450 x 320mm, Anicolor can produce A4 brochures, A3 posters, flyers and business cards, using the same range of materials we use on the B2 machine. This means we get the same top quality product no matter how big or small the order.

DIGITAL

Xerox Docucolour 240 - twins christened Tom and Jerry !

Direct from artwork to paper or board for shorter runs which just cannot wait! Ideal for last minute invitations, data sheets, menus or flyers. We run two Xerox digital machines within our pre-press department and utilise our extensive finishing equipment to give every project that professional finish.
